

```
[root@clientb ~]# umount /mnt/clone
[root@clientb ~]# rbd unmap --pool rbd clone1
[root@clientb ~]# rbd showmapped
[root@clientb ~]# unset CEPH_ARGS
```

- 10.2. On the `clienta` node, exit the `cephadm` shell. Unmount the file system, and then unmap the RBD image.

```
[ceph: root@clienta /]# exit
[root@clienta ~]# umount /mnt/image
[root@clienta ~]# rbd unmap --pool rbd image1
[root@clienta ~]# rbd showmapped
```

- 11. Exit and close the second terminal. Return to `workstation` as the `student` user.

```
[root@clientb ~]# exit
[admin@clientb ~]$ exit
[student@workstation ~]$ exit
```

```
[root@clienta ~]# exit
[admin@clienta ~]$ exit
[student@workstation ~]$
```

Finish

On the `workstation` machine, use the `lab` command to complete this exercise. This is important to ensure that resources from previous exercises do not impact upcoming exercises.

```
[student@workstation ~]$ lab finish block-snapshots
```

This concludes the guided exercise.
